

INNOVATION IN LAUNDRY TRANSPORTATION EQUIPMENT

Dura-Cast continues to respond to requests from laundry managers who want innovative products that solve their problems. Garment bars for laundry carts did not appear to be a likely candidate for innovation, but laundry managers told us that the existing bars were routinely failing, rendering their carts unusable.

The Laundry Managers' Problems

1. Carts with permanently installed garment bars provide only one-way transportation; and thus, are expensive to run
2. When garment bars fail:
 - a. clean garments fall and become soiled
 - b. the cart is unusable
3. Black oxidation from aluminum garment bars soils clean garments

The Equipment Problem

Aluminum garment bars are not reliable, and permanently installed garment bars limited the usefulness of the cart.

PRODUCT DESCRIPTION

Removable Top Mount Garment Bar

Dura-Cast has introduced a new removable stainless steel top mount garment bar designed to provide the temporary bar space required to handle hanging garments, costumes, uniforms, table cloths, etc. Once hanging garments are delivered, the bar is lifted off and the cart reverts back to its traditional use as a bulk laundry cart. The Removable Top Mount Garment Bar is a revolutionary design for those laundry operations where added versatility is a benefit and adaptability increases return on investment.

The Removable Top Mount Garment Bar is constructed of stainless steel for structural strength, long life, and extended good appearance. The stainless steel rod and welded-on end caps provide the strength required to handle those heavy hanging garment loads. Unlike aluminum garment bars, stainless steel garment bars don't oxidize and create a black substance that rubs off on hands, clothes, and garments.

Removable Top Mount Garment Bars are custom sized to fit most standard laundry carts. Please indicate the width of your laundry carts when ordering.

Permanent Mounted Garment Bar

Stainless Steel bar and end plates provide the strength and durability to stand up to the heaviest hanging garment loads. Bar to end plate welds are stronger than traditional aluminum welds and provide many more years of uninterrupted service. Stainless steel will not create the black oxidation that aluminum does so hanging garments will not become soiled when they come in contact with our garment bars.

FEATURES	FUNCTIONS / BENEFITS
Stainless Steel	Toughest material that won't rust
Permanent Mounted Bar	End plates are bolted to cart sides for strength
Removable Top Mounted Bar	Temporarily converts laundry cart to garment cart
Heavy Duty Load Capacity	Tested to hold a full bar of hangered table cloths
