

LAUNDRY TRANSPORTATION EQUIPMENT

Dura-Cast continues to respond to requests from laundry managers who want innovative products that solve their problems. When a laundry manager told us that the cart vender with the lightest existing poly-shelf said that it would be impossible to make the shelf any lighter, we took that as a challenge.

The Laundry Managers' Problem

“Standard poly-shelves cost us money, productivity, and efficiency because they are heavy, cause operator fatigue, and add to the number of worker compensation claims. Make the new lighter shelf and compatible with our existing cart population.”

The Equipment Problem

Traditional poly-shelves are too heavy, averaging over 17 pounds, while metal shelves distort and rust.

PRODUCT DESCRIPTION

The Xtra-Lite Shelf for the LinenMaster XChange Cart is the lightest poly-shelf in the market today. It is a new generation shelf designed for lightness, strength, durability, compatibility with legacy carts, and good looks. Even under hot heavy loads, this revolutionary new Xtra Lite shelf won't sag or fail.

The Dura-Cast Design Team created a new shelf that weighs in at just 13 pounds - 4.5 pounds lighter than the lightest competitive poly-shelf. They developed a new structural model that permitted the shelf to withstand a heavy load of hot linens without sagging. Ergonomic principles were applied so that the shelf was easier to handle for personnel using the shelf both inside and outside of laundry facilities.

New resins were investigated, evaluated, and tested to bring the structural parameters of the shelf up to meet the stringent requirements for commercial laundry facilities. The result is a shelf that withstands heavy hot loads, drains well, has hand holds designed to meet the requirements for today's smaller workforce. The resin itself will withstand many years of use and abuse, while remaining good looking.

Xtra-Lite Shelf for LinenMaster Xchange Cart

Optional heavy-load shelf hooks can be installed to ensure that the heaviest loads don't cause the shelf to fall. The front groove serves as a shelf restraint when the cart is in the bulk linen mode.

If you want your laundry operators to be more productive, efficient, and less likely to be injured handling heavy shelves, provide new Xtra-Lite Shelves and see the difference.

Xtra-Lite Replacement Shelves will fit many competitive carts. Call for more information.

FEATURES	FUNCTIONS / BENEFITS
New generation shelf	Industry's lightest with longer asset life
Ergonomically designed	Lightness and ergonomically placed hand holds make your workforce more productive and helps reduce worker-related injuries
Designed for strength	Unique structural design supports the heaviest loads
Special impact resistant polyethylene resin	Toughest material used in shelves today, scratch and gouge resistant
Optional heavy-load shelf hooks	Ensure shelves won't fall
Optional molded-in graphics	Upgrade the appearance of your laundry transportation equipment and make your logo more visible

SPECIFICATIONS

Overall Dimensions	45" x 26" x 2-1/4"
Manufacturing Material	Impact resistant linear polyethylene resin
Drain Holes	Integral molded in
Color	Cream
Dimension Between Hooks	43-1/2"
Weight	13 lbs.
Options	
Colors	Request price quote
Heavy-Load Hooks	Request price quote
Molded-In Custom Logo	Request price quote
